We haven't stopped huge breaches. The focus now is on resilience, with smarter ways to detect attacks and faster ways to respond to them. In November 2014, an especially chilling cyberattack shook the corporate world - hackers, having explored the internal servers of Sony Pictures Entertainment, captured internal financial reports, top executives' embarrassing e-mails, private employee health data, and even unreleased movies and scripts and dumped them on the open Web. The results showed how profoundly flat-footed this major corporation was.
