**Would you like to build your own affordable hydroponic garden and enjoy fresh food in any season including winter?**

**Are you tired of buying worn out and dirty produce and want to start providing fresher, healthier food to your family?**

Would you like to eat daily greens and veggies while saving money on your grocery bills?

If you answered yes to any of the above questions, then this practical guide will provide you with everything you need to know about how to build, plant, and maintain your own hydroponic garden.

Even if you're a complete newbie to gardening of any kind, you can build your own hydroponic system.

And you can start growing your own fresh and healthy produce anywhere and in any season.

**Inside this book, you will discover:**

- Shows you how to build your own hydroponic system rather than using pre-made systems, so you can cut your costs
- Exactly how to build your own hydroponic system from A-Z even if you have never built something yourself before
- The ideal conditions for germinating seeds of your selected crops in order to avoid seed failures.
- The when, what, and how of nutrition recipes for each type of crop, so your plants can grow to their fullest potential
- Everything you need to know for maintaining your hydroponic garden so you can have a year-round supply of your favorite crops
- How to diagnose and troubleshoot the most common problems in hydroponic systems.
- How to choose the best lights for your hydroponic system so you can grow your own food indoors without sunlight
- Which systems are best for specific crops, the nutrients required, and even how to make your own nutrient solutions at home
