

China, Critical Minerals, and the National Security Threat

author: Peter L. Bergen

2026-06

Synopsis

author	Peter L. Bergen
inLanguage	english

We can't do much without batteries and microchips; they power everything from smartphones to electric cars to defense systems. But the US ceded control of the raw materials required to make them - to its chief rival, China. Is it possible to catch up, especially given America's more stringent labor and environmental standards?
