In this fascinating second volume of *Real Monsters*, explore tales of strange beasts walking the land, stalking the lakes and seas, as well as flying high overhead. Encounter lake monsters, vampire devil dogs, demons, werewolves, man-beasts, rabid vampire people, and more. Creatures straight out of *Jurassic Park* and so terrifying they could be the result of some experiment gone awry, or are they monsters that have evolved within waterways and forests? These ominous creatures haunt our nightmares, yet appear to be as real as any other creature that populates our planet. Research continues on all of these monsters, and startling new evidence appears every year that supports their existence. More strange encounters and bizarre, often illogical, paranormal experiences are being reported than ever before. Credible eyewitness reports make us face the fact that the monsters we relegate to fairy tales have indeed been quite real all along. Prepare to take a journey into the unexplained.
