The dead should stay dead.

Daniel Harper surfaces from a coma that has robbed him of two years of his life only to find himself thrust into a world threatened by an outbreak that could wipe out all mankind.

Forming an uneasy alliance, Daniel is assisted by James Edmunds, the top genetic research scientist at the privately run research centre that currently holds him prisoner, while trying to discover the secrets to the Resurrection program.

On the run and running out of time, can Daniel stop the approaching apocalypse?

If you loved Jason Bourne and *The Walking Dead*, then this is definitely for you. Fast-paced and plot-driven, an audiobook you won't want to put down until the very end.
